

Retinal Imaging by Optos

At Erie Optical, we pride ourselves on providing our patients with the best possible standard of care.

We are now able to provide a digital image of the retina that can be shown to the patient on a computer monitor. The Optomap technology allows Dr. Waldman to view and evaluate a much larger area of the retina as compared to standard dilating drops.

Retinal issues such as macular degeneration, diabetic retinopathy, retinal growths, holes, tears and/or detachments can now be seen without dilation in many patients. Dilation may still be required for a more detailed and magnified view in some cases.

Dr. Waldman would like ALL his patients to have a retinal screening with the new Optomap scanning digital imaging system. The cost for the procedure is \$25.00 (not usually covered by insurance).

Early Detection is crucial!
